

Release name: KNOWAGE 8.0.8

From the previous version 8.0.7 the following bugs have been solved:

- When saving document metadata the saving function fails if a file has been uploaded
- CUSTOM CHART: in the preview section it is not visible the checkbox to choose the dataset for doing the preview
- QBE fixed the filter single / multi value
- Menu - An external app will always open a new window
- Data entry: if the user inserts a datetime and save the form, the software records the day before the one inserted
- QBE, advanced view, the paginator data does not work
- QBE, join type is not correctly saved
- Table Widget - export PDF: timestamp format is not correct
- REGISTRY: when a field is of type date their values are not visible in the registry
- Table widget XLSX export is cut off for large datasets in case some custom number precisions are defined
- Table widget XLSX export produces invalid files for large datasets in case some custom number precisions are defined
- When exporting table widget into XLSX, timestamps are exported as regular dates, without the time information
- Table widget displays integer values as float when using ORACLE numbers with 0 scale
- Table widget XLSX export displays integer values as float when using ORACLE numbers with 0 scale
- After BM is saved, the generated button must be visible
