

## Release name: KNOWAGE 8.1.3

From the previous version 8.1.2 the following changes have been made:

### New User Story

- Add MySQL 8 support
- Meta & QbE certification on Vertica 12.0
- Add support for sensible, masked, encrypted and subject id metadata for the columns of a business entity in Meta

From the previous version 8.1.2 the following bugs have been solved:

- Birt default spudsoft XLS/XLSX emitter splits results in several sheets: page break maximum is 10.000
- TABLE WIDGET: for totals in pinned columns only the label is merged if the row span is enabled even if the two total labels are different
- The \_description syntax for a parameter is not working if the AD is of type popup and the document is opened in cross navigation
- An error occurs when downloading configuration file
- The tree type filter service is not returning the metadata object
- Document execution: The URL service does not handle errors correctly
- Error during boot about CleanAuditJob
- It is still visible the plus button when creating a new function in the function catalogue or when opening an existing one
- Kpi threshold, then the user click on the widget the GUI will change the position
- Cannot execute data set with empty parameter
- Birt documents toolbar export service is not working
- It is not possible to add svg code on html widget
- Crosstab ordering xls export issue
- Error message is shown when attempting to save a schedulation

- Error on Avro file opening Workspace
- Add order NULL LAST on widget table
- If a cockpit uses a dataset with scope enterprise and it is opened by an end user is not working
- Non blocking error executing xlsx export on cockpit
- KNOWAGE Installer doesn't work on Linux OS because of java.lang.NoSuchMethodError in jdbc/hsqldb.jar
- 8.1 installer contains wrong DB scripts
- Prepared dataset preview on dataset catalog is not working
- Registry: The dependsFrom domains are loaded too late
- Registry: integer numbers are displayed and edited as float values
- Workspace, create document option are not profiled
- Workspace, run schedulation FLAG does not hide the option
- Workspace, schedulation section shows restEventJob
- An error occurs while executing an OLAP document
- Vertica: dataset preview fails in case of big integer values
- Registry, after ordering column the user cannot change values
- Registry: The numeric field does not show the correct value
- Federator: NEXT Button is in the button, the user must scroll the page to see it
- Dataset management: I cannot remove the selected category (if it is optional)
- Selections and selectors do not work in Vertica
- Wrong extension proposed when uploading a file in a Mondrian schema
- Parameter inside dataset preview is not filled
- In map widget, the summary legend doesn't manage more than one decimal place
- Export XSLX from scheduling is EMPTY
