

Release name: KNOWAGE 7.4.32

From the previous version 7.4.22 the bugs are now solved:

- The dossier is not working
- DOSSIER: using optional driver is not working
- DOSSIER: if no parameter is used the dossier does not work
- An error occurs when developer filters list of datasets from catalogue in case he is not enabled to any datasets category
- TABLE WIDGET - search button
- DOSSIER: the download of the docx produced by an activity is not working
- Integer values ending with 0 are displayed as ...0.0, for example 2020 is displayed as 2020.0
- Some dataset fields are not displayed within the dashboard designer
- Dashboard designer breaks when a dataset column is java.time.LocalDateTime type
- IMPORT document: when a document with a python widget is imported the python environment is not correctly associated
- DATASET SOLR: in cockpit the dataset solR doesn't retrieve data when a multivalue default value is set into the dataset preview
- File DataSet cannot manage Integer values in column of type Long
- OLAP: an error occurs when Mondrian schema driver contains special characters such as "&"
- OLAP: an error occurs when reloading customized view in case there are multivalue drivers
- XSLX Chart exporting with column variables doesn't work
- Scheduled execution of a dashboard (that uses cache) randomly fails
- Improper Neutralization of Alternate XSS Syntax
- Unsafe sanitization of HTML snippets that leads to XSS vulnerabilities
- Dataset execution is too slow using PostgreSQL
- The cockpit export xls does not order the table using the default setting
- TABLE WIDGET: the seconds of a timestamp column are truncated at 00 if the format 'dd/mm/yyyy HH:MI:ss' is used

- MAP WIDGET: static layer as first layer block pop-up in the second layer
- The user cannot upload the file with same name
- The "Start from row number" doesn't work
- Profile attributes is not managed on PostgreSQL Data Set
