Release name: KNOWAGE 7.4.36

From the previous version 7.4.32 the bugs are now solved:

- QUARTZ: Tomcat doesn't start because of the Quartz recovering procedure

- LOV test values import export issue

- Security-vulnerability: jQuery v1.12.4 needs to be updated to 3.5.0

- [Security vulnerability] Path traversal in download functionalities

- [Security vulnerability] Path traversal in upload functionalities

- Export XLS QBE, it doesn't work if the user add calculated filed

- [Security vulnerability] Account validation bypass

- OLAP multi-value selection fails to propagate through cross navigation

- User can remove data set from Cockpit though it is used in a TEXT widget

- MongoDB: connection test fails

- CHART WIDGET: the ordering according to the series values is not working

- Strange behaviour in cache management when a user set the parameter in Dataset Management inside the dashboard in edit mode
