

Release name: KNOWAGE 8.0.17

From the previous version 8.0.9 the following changes have been made:

New User Story

- As a final user, I would like to authenticate through OAuth2 with PKCE flow, while authorization (i.e. roles and profile attributes) has to be defined within KNOWAGE internal metadata.
- As a system admin, I would like to configure OAuth2 connectors using system properties or environment variables
- As a user I want to set thresholds using variables and parameters

From the previous version 8.0.9 the following bugs have been solved:

- Error while saving georeport template
- Calendar update does not work
- "My Workspace" icon still visible even if removed from role's authorization
- DOSSIER: using optional driver is not working
- DOSSIER: if no parameter is used the dossier does not work
- An error occurs when developer filters list of datasets from catalogue in case he is not enabled to any datasets category
- DOSSIER: the download of the docx produced by an activity is not working
- Integer values ending with 0 are displayed as ...0.0, for example 2020 is displayed as 2020.0
- When SSO detects an user that is NOT defined into KNOWAGE metadata, a NullPointerException occurs
- Resource manager doesn't show the root files
- File DataSet cannot manage Integer values in column of type Long
- Some dataset fields are not displayed within the dashboard designer
- The numbers formatting is not working when changing the language
- Dashboard designer breaks when a dataset column is java.time.LocalDateTime type
- DATASET SOLR: in cockpit the dataset solR doesn't retrieve data when a multivalue default value is set into the dataset preview
- [Security vulnerability] Improper Neutralization of Alternate XSS Syntax
- Driver visibility conditions: date type driver doesn't work
- [NOT A BUG] OLAP: an error occurs when Mondrian schema driver contains special characters such as "&"
- What-If: I cannot select simulation versions to be deleted
- OLAP/WhatIf: Hidden measures are still visible

- [Security vulnerability] Unsafe sanitization of HTML snippets that leads to XSS vulnerabilities
- OLAP: an error occurs when reloading customized view in case there are multivalued drivers
- What-If: final user cannot unlock model, therefore workflow is interrupted
- What-If: when exporting a what-if scenario (i.e. a version), final file has no extension
- Scheduled execution of a dashboard (that uses cache) randomly fails
- Registry doesn't work on sqlserver with a subentity shown as a combo
- Dataset execution is too slow using PostgreSQL
- CROSS NAVIGATION: in the target document the parameter panel is no longer visible
- The active selections are not saved when switching from edit mode to visualization mode
- Dataset persistence scheduling info seems to be lost
- The cockpit export xls does not order the table using the default setting
- [HTML Widget] Cannot change row limits
- Document in "suspended" state cannot be executed by the Admin
- TABLE WIDGET: the seconds of a timestamp column are truncated at 00 if the format 'dd/mm/yyyy HH:MM:ss' is used
- Functions and Widget Gallery are missing
- MAP WIDGET: static layer as first layer block pop-up in the second layer
- [Cross navigation] Cross navigation from a popup doesn't work
- the user cannot upload the file with same name
- The "Start from row number" doesn't work
- Heatmap. color used for null values is not using the first color in the palette
- Cockpit - Chart Widget - Capture Screenshot: a grey area is shown
- Widget gallery import doesn't work
- CHART WIDGET: the tooltip for the change interaction modality icon in the chart menu is not correct
- Locale issue on Dossier 8.0
- TABLE WIDGET: the label of the summary row is not visible when exporting the pdf of the table
