

Release name: KNOWAGE 8.0.20

From the previous version 8.0.17 the following bugs have been solved:

- [Security vulnerability] Account validation bypass
- [Security vulnerability] Path traversal in download functionalities
- [Security vulnerability] Path traversal in upload functionalities
- Cockpit - Chart Widget - Capture Screenshot: doesn't use current style
- [Security vulnerability] Signup service is ALWAYS enabled
- DOSSIER: it is not possible to delete suspended executions
- CHART WIDGET: the ordering according to the series values is not working
- OLAP multi-value selection fails to propagate through cross navigation
- Export XLS QBE, it doesn't work if the user add calculated filed
- The user can remove data set from Cockpit though it is used in a TEXT widget
- MongoDB: connection test fails
- TABLE WIDGET: the export pdf is not working if there isn't the summary row
- Issues about editing document using DEV
- As superadmin, when associating a JNDI datasource to another tenant, I cannot see it anymore
- After the refresh the chart will be broken
- The XLS export doesn't export all data
- The export pdf show a pink circle in place of the three vertical dots of the menu widget
- Dossier service returns ERROR 400
- Cross table - Measures alignment does not work
- logout-successful.html misses some styles
- WHERE condition is not correct when TimeStamp fields have Data Type format (day month year)
- Dashboard excel export not working
- widget excel export – also the filter is exported
- Strange behavior in cache management when a user set the parameter in Dataset Management inside the dashboard in edit mode
- Exported dashboard should not have associative selections inside Active Selections
